

Did you know your
adrenal tumor may be
producing **excess cortisol**
and could be impacting
your health?

Your high blood pressure
and/or high blood
glucose may be related.

Take action today! You may qualify for the GRADIENT Study.

The GRADIENT research study (clinical trial) is a study looking at the safety and effectiveness of an investigational medication for patients with hypercortisolism, also known as excess cortisol levels, due to cortisol-secreting adrenal adenomas.

Adrenal tumors may affect your health by contributing to high blood pressure and high blood glucose.

Consider joining the GRADIENT research study and assist us in learning more about the effects of adrenal tumors on high blood pressure and high blood glucose.

Please reach out to us today to learn more!
Please contact:

You might be able to participate if you:

- Are 18 to 80 years of age
- Have high blood pressure and/or high blood glucose
- Have an adrenal adenoma
- Are not currently pregnant or breast feeding

If you qualify and choose to enroll in the study, you may be reimbursed for your time and travel expenses.
